

## Track A Lead – Basic Science

**Nancie Archin, United States**  
*University of North Carolina*

Nancie Archin is an assistant professor at the University of North Carolina (UNC) and the UNC HIV Cure Center in Chapel Hill, North Carolina. She has more than 14 years of experience in HIV latency research. Since joining the faculty at UNC, Dr Archin has worked to move laboratory observations into clinical testing and applications. She is the lead author of several key publications demonstrating the ability of latency reversal agents to disrupt latent HIV *in vitro* and in humans.

Her current research focuses on understanding sex-specific factors that contribute to HIV persistence in women, further defining modalities to disrupt latency and clear latently infected cells, and applying these observations in clinical applications.
